Q1. FizzBuzz

: Submitted files that contain code and the tests to Github.

Q2. Leap Year

: Submitted files that contain code and the tests to Github.

Q3. Apply test driven development within the social media system from in-class activity 1.

If I were working on the comment functionality of the social media system, my TDD approach for it would be:

- 1) Create a test that the number of comments displayed in the feed is counted.
- 2) Create code to check if a comment has been written or deleted by a user.
- 3) Create code that counts the number of comments.
- 4) Create a test that calls the above and verifies that the comment increase or decrease are working properly.
- 5) Create a page by setting the coordinates for the number of comments to be displayed in the feed.
